Description

Context

This data is taken from a Machine Learning Hackathon, in which i participated recently

Content

The dataset consist of Physical attributes of any pet such as condition, colour, length, height, issue*date, listing*date, X1 & X2 etc.

Inspiration

I have participated in this competition, but couldnt get a accuracy score of more than 90.82. So, i am keeping it in this open forum to participate & helps us identify the best approach / method to be used for this problem
